Information Insights, an IBM Premier Business Partner, is a software solutions provider focused on helping companies improve enterprise data management. With domain expertise in the areas of data security, data privacy and data lifecycle management, our team has the skills and experience required to help clients drive cost reduction and risk mitigation in their enterprise application portfolios. Focused primarily on IBM's Information Integration and Governance strategy including InfoSphere Optim Data Lifecycle Management and Data Privacy, InfoSphere Guardium Database Activity Monitoring and Data Encryption, Information Insights is your source for enterprise data management security and optimization.

IBM InfoSphere Optim

Enterprise applications and databases don't just help run your business - they are your business. And every year, they grow in size and complexity - making them harder to manage with service level agreement requirements and increased maintenance costs. The result? You are exposed to legal liability as you attempt to protect data privacy and security. Read More

IBM InfoSphere Guardium

IBM InfoSphere Guardium provides the most robust solution for assuring the privacy and integrity of trusted information in your datacenter — also reducing costs by automating the compliance auditing process. Guardium provides organizations a way to effectively address all aspects of real-time data security and the compliance life cycle.

IBM InfoSphere Guardium Data Encryption provides encryption capabilities to help you safeguard structured and unstructured data and comply with industry and regulatory requirements. Guardium performs encryption and decryption operations with minimal performance impact and requires no changes to databases, applications or networks.

Vormetric Data Encryption

Vormetric Encryption allows enterprises to encrypt sensitive data on servers, control access to the encrypted data, and then to report on who is accessing that information. Vormetric Encryption supports all of the major platforms – Linux, Unix, Windows – and can be used in physical, virtual and cloud environments. This enterprise data encryption solution protects both structured and unstructured data with integrated data encryption, encryption key management and a common infrastructure environment.
