#### — IBM Authorized Training

- InfoSphere Guardium
- InfoSphere Optim

InfoSphere Guardium provides the most robust solution for assuring the privacy and integrity of trusted information in your datacenter — also reducing costs by automating the compliance auditing process. As part of IBM's Information Integration and Governance strategy, Guardium provides organizations a way to effectively address all aspects of real-time data security and the compliance life cycle.

With Guardium, sensitive data is protected, policies for data access are monitored and enforced and the data infrastructure is assessed for vulnerabilities and configuration risks. Managed services from Information Insights empowers security and compliance lifecycle automation by:

- Developing and maintaining best practices for a healthy environment
- Ensuring full adoption of the most current Guardium capabilities
- Maximizing value of the data and reporting provided by Guardium
- Continually optimizing strategies to reduce risk
- Simplifying expansion of monitored environments

### SERVICE OFFERINGS

Information Insights Managed Services provide Guardium administration in the following areas:

- Proactive health checks with monthly reporting
- User and group maintenance
- Entitlement reports, vulnerability assessments and sensitive data discovery maintenance
- Appliance patching
- Capacity planning
- New or adjusted policies (up to 3 per month)
- Monthly requirements mapping meeting
  - Alignment to business model and security requirements
  - Document new and changing requirements
  - Improvement of usability of Guardium outputs
