In the era of big data, many organizations require the speed, agility and analytics of a data warehouse appliance. These appliances offer a fast way for organizations to manage their data for better insight into business decisions. Security and privacy are top of mind for organizations that manage customer information. Organizations have a responsibility, not only to support legal compliance, but a responsibility to their customers to act to secure and protect sensitive information.

IBM InfoSphere Data Privacy and Security for Data Warehousing supports your data warehouse appliance initiatives by helping to enable you to identify sensitive data and protect and secure it, based on your predefined policies and compliance requirements.

- Define and maintain data privacy policies
- Discover sensitive data
- Mask or redact sensitive data
- Monitor and audit data activity
- Manage governance and compliance

PROTECT YOUR DATA WAREHOUSE IN 5 DAYS

Ensure compliance in just five days with data privacy and security services from Information Insights for IBM PureData System for Analytics (Netezza), Teradata, and Oracle Exadata. Let the experts at Information Insights monitor and mask your confidential information to protect privacy and support compliance. Our "5 Day" service offering include:

— MONITORING

- 1 pre-built Guardium collector
- Privileged user monitoring for up to 4 nodes

— MASKING

- In-place masking of up to 30 instances of PII
- Masking within the following categories:
 - Names and addresses (US)
 - Social security numbers
 - Dates
 - Email addresses
 - Credit card numbers
 - String and numeric randomization
